Subject Index of Volume 21

Arcing fault detection
optimal, using signal processing techniques, 121
Autonomous energy system
suitable for new communities in developing countries, optimum operation of, 137

Capacitor voltage transformer
induced ferroresonance — causes, effects and design considerations, 23
Conductors
galloping, on 230 kV transmission line, study of, 43
Contingencies, ranking of, for on-line
applications: extended formulation, 87
Control
of substation, protection and related monitoring functions, expert systems applications to, 71
Controller
variable parameter, effects of, on dynamic performance of HVDC transmission system, 173
Controller
real-time supervisory, for autonomous wind–diesel system, Petri net based specification of, 203
Cost curves
non-monotonically increasing incremental, optimization of optimal coefficients of, 99
Current load
in high voltage power transmission line, 181
Current suppression
overvoltages in reactive circuits due to, 225

Describing function methods
two-degree-of-freedom analysis of power line galloping by, 187
Developing countries
optimum operation of autonomous energy system suitable for, 137
Digital frequency meter, 17
Digraph approach
sensitivity analysis of power system dynamics, 57
Dispatch
economic power, simple algorithm for, 147
simplified economic, short-term unit commitment with, 115
Dynamic processes
long-term, in power systems, fast solution method for evaluation of, with provision for island operation, 217

Economic dispatch
simplified, short-term unit commitment with, 115
Economic power dispatch
simple algorithm for, 147
Energy system
autonomous, suitable for new communities in developing countries, optimum operation of, 137

Expert system applications
to protection, substation control and related monitoring functions, 71

Fault detection
arcing, optimal, using signal processing techniques, 121
Feedback
power system output, stabilizer design of, via optimal subeigenstructure assignment, 107
Ferroresonance
capacitor voltage transformer induced — causes, effects and design considerations, 23
Frequency meter
digital, 17

Galloping
power line, two-degree-of-freedom analysis of, by describing function methods, 187
Galloping conductors
on 230 kV transmission line, study of, 43

HVDC transmission system
effects of variable parameter controller on dynamic performance of, 173

Impedances
generalized operational, of solid-rotor synchronous machines, least absolute value estimation of, from standstill frequency response test data, 91
Infeasibility treatment
for Newton optimal power flow method, clarification of applicability of, 1
Instabilities
voltage, subsequent to short-circuit recoveries, 9
Island operation
fast solution method for evaluation of long-term dynamic processes in power systems with provision for, 217

Knowledge based model
for study of power system steady-state operation, 231

Least absolute value estimation
of generalized operational impedances of solid-rotor synchronous machines from standstill frequency response test data, 91
Lightning transient phenomena
study of internal stresses in transformer windings due to, 161
Line flow calculation
two-step sensitivity approach for, 63

Microprocessor
32-bit, high speed power system protection scheme using, 195

Elsevier Sequoia/Printed in The Netherlands

Monitoring functions
protection, substation control and related, expert system applications to, 71

Newton optimal power flow method
clarification of applicability of infeasibility treatment for, 1

Optimal coefficients
of non-monotonically increasing incremental cost curves, optimization of, 99
Optimal power flow
Newton method, clarification of applicability of infeasibility treatment for, 1
Optimal subeigenstructure assignment
power system output feedback stabilizer design via, 107
Optimization
of optimal coefficients of non-monotonically increasing incremental cost curves, 99
Overvoltages
in reactive circuits due to current suppression, 225

Pattern recognition method
application of, to transient stability problem, 155
Petri net based specification
of real-time supervisory controller for autonomous wind–diesel system, 203
Power dispatch
economic, simple algorithm for, 147
Power flow
optimal, Newton method, clarification of applicability of infeasibility treatment for, 1
Protection
substation control and related monitoring functions, expert system applications to, 71
Protection scheme
high speed, for power system transmission line, using 32-bit microprocessor, 195

Ranking
of contingencies for on-line applications: extended formulation, 87
Reactive circuits
overvoltages in, due to current suppression, 225
Reliability evaluation
multi-area, new algorithm for — simultaneous decomposition–simulation approach, 129

Sensitivity analysis
of power system dynamics: digraph approach, 57
Sensitivity approach
two-step, for real-time line flow calculation, 63
Short-circuit recoveries
voltage instabilities subsequent to, 9
Signal processing techniques
optimal arcing fault detection using, 121
Stability problem
transient, application of pattern recognition method to, 155
Stabilizer
power system output feedback, design of, via optimal subeigenstructure assignment, 107
Steady-state operation
of power system, knowledge based model for study of, 231
Stresses
internal, in transformer windings due to lightning transient phenomena, study of, 161

Transformer
capacitor voltage, induced ferroresonance — causes, effects and design considerations, 23
Transformer windings
internal stresses in, due to lightning transient phenomena, study of, 161
Transient stability problem
application of pattern recognition method to, 155
Transmission line
high voltage power, current load in, 181
power system, high speed protection scheme for, using 32-bit microprocessor, 195

Unit commitment
short-term, with simplified economic dispatch, 115

Variable parameter controller
effects of, on dynamic performance of HVDC transmission system, 173
Voltage instabilities
subsequent to short-circuit recoveries, 9

Wind generated power
assessment of economic value of, to electric utilities, 33
Windings
transformer, internal stresses in, due to lightning transient phenomena, study of, 161
